Title: Ethics and Morality for Sustainable Environment: A Psychological and Spiritual Perspective

ABSTRACT

Human-caused environmental changes are possessing greater threat and causing devastating consequences for all life on the earth. In recent years environmental problems have increased in complexity, global scope and severity as well as the intensity and frequency which they occur, confronts with ethical and moral issues to be addressed. Ethical and moral considerations are utmost important and should be given priority in solving environmental problems. Recent research studies on environmental problems have identified, besides technology and economic, social and psychological causes. Given this background and to achieve sustainable environment it is important to focus on ethics and morality from a scientific as well as from wisdom based approaches rooted in spirituality. The presentation will highlight the need for psychological and spiritual approaches, in addition to technological, solutions to achieve sustainable environment and discuss also Tawhid, Sufi and Islamic ethical and moral principles for Sustainable Environment practices for future.
